'Moulding, the business where a packaging line needs to fit the process like a cap on a bottle'

What do you need?

Along with the product that needs to be filled into cases a perfectly square case with a tight placed bag is needed to pack the moulded cases without waste.

How to achieve this?

With over 30 years of experience, Niverplast has been improving businesses all over the world with the automation of our packaging equipment.

Research & development and happy customers have been our top one priority. Together, is our key to success.

Whom?

Niverplast's passionate people have developed an efficient and compact Moulding packaging solution.

What machines?

- Case erecting with perfect bag placing to avoid dis-balance in stacked moulding products, and the best part, both case erecting and bag placing are integrated in 1 machine, our **CombiPlast!**
- The cases can be transported with a smart **Self Driving Vehicle (SDV)** towards your filling position. Or we can do the filling for you!
- Impuls sealing is used in bag sealing to create the perfect seal with our **VarioSeal** machine. Afterwards the top of the box will be closed with our **Taper**. To create an even smaller footprint case top closing can also be integrated in the **VarioSeal**.

A perfect way to hand over your product to your customer with the slightest touch of hand labor.

Caps, closures, lids & pharmaceutical components are just a few examples of products which can be packed perfectly with an automated packaging solution from Niverplast.

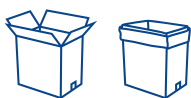

Do you have a Moulding product which need to be packed into cases and do you want to automatize your packaging?

Niverplast is your passionate partner in improving your business!

Who we are

We're a worldwide player in the packaging industry and located in The Netherlands. We believe that happy people create happy customers! We are passionate, think different and are continuously developing ourselves and the products we deliver.
